Methods, Conventions & Notes

Farm machinery and equipment placed in service after 2017 use the 200% declining-balance method over a 5-year recovery period; equipment placed in service earlier, and most general farm machinery, uses the 150% declining-balance method over a 7-year recovery period under the General Depreciation System (GDS).

Single-purpose agricultural structures, grain bins, and improvements use straight-line recovery over their applicable periods (10, 15, or 20 years). The pole barn / machine shed and the 12,000-bushel grain bin are recovered straight-line over 20 years.

The half-year convention applies to personal property unless more than 40% of the aggregate basis of property was placed in service during the last three months of a tax year, in which case the mid-quarter convention applies for that year's additions.

No assets were disposed of in 2025 and no section 179 expense or special (bonus) depreciation allowance was claimed. Total 2025 MACRS depreciation of \$18,500 is reported on Form 4562, line 22, and on Schedule F, line 14.
